

TITLE

CYCLOPROPANE-FATTY-ACYL-PHOSPHOLIPID SYNTHASE

ABSTRACT OF THE DISCLOSURE

5 This invention relates to an isolated nucleic acid fragment encoding a  
cyclopropane synthetase. The invention also relates to the construction of a  
chimeric gene encoding all or a portion of the cyclopropane synthetase, in sense or  
antisense orientation, wherein expression of the chimeric gene results in  
production of altered levels of the cyclopropane synthetase in a transformed host  
cell.
